### ***Allowable Subject Matter***

2. Claims 1-7 are allowed.

The following is an examiner's statement of reasons for allowance: claims are allowable over the prior art of record since the cited references taken individually or in combination fails to particularly disclose An method for controlling a high-frequency switching module comprising a diplexer comprising first and second filter circuits for dividing signals received by an antenna to a receiving signal of a first transmitting/receiving system and a receiving signal of second and third transmitting/receiving systems, a first switching circuit disposed downstream of the first filter circuit for switching a transmitting circuit and a receiving circuit of the first transmitting/receiving system by voltage applied from a control circuit, and a second switching circuit disposed downstream of the second filter circuit for switching a transmitting circuit of the second and third transmitting/receiving systems, a receiving circuit of the second transmitting/receiving system and a receiving circuit of the third transmitting/receiving system by voltage applied from control circuits, and wherein the method comprising applying a positive voltage from the control circuit to the first switching circuit to connect the transmitting circuit of the first transmitting/receiving system in the first switching circuit is connected to the antenna by
